

EVENTS

Event propagation listeners, handlers and triggers

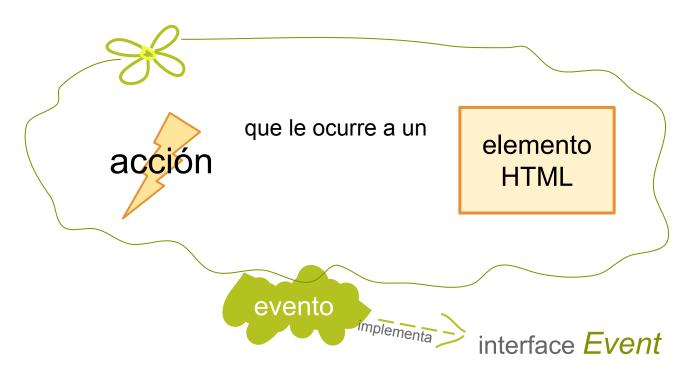

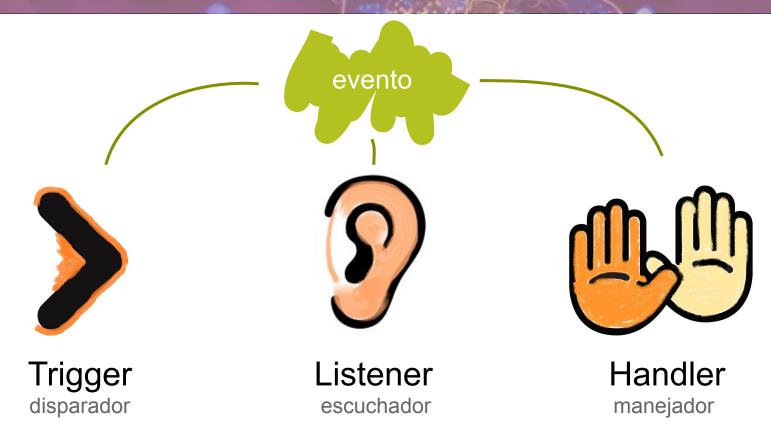

Nuestra charla

- 1 Conceptos
- 2 Propagación eventos: Capturing and Bubbling
- 3 stopPropagation VS preventDefault
- 4) Más eventos con JS

¡Qué es un Evento?

1 Conceptos

elemento HTML

<but

- ? Usuario aprieta el button
- ? Módulo hace click en button

evento **CLICK**

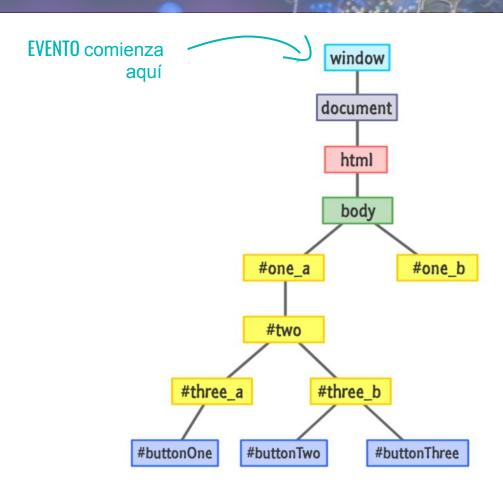

button.addEventListener('click', funcion(),false);

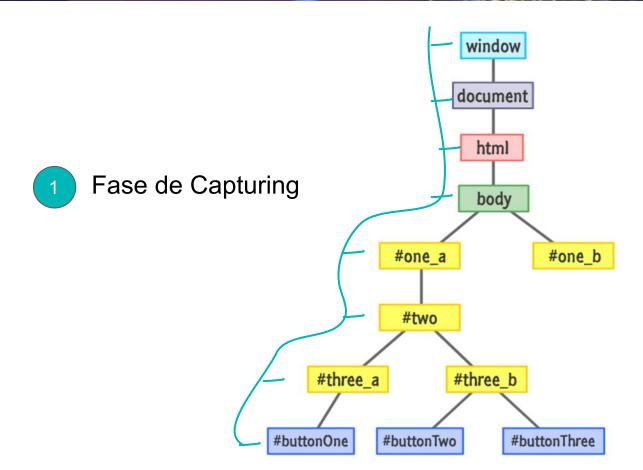

Handler por HTML

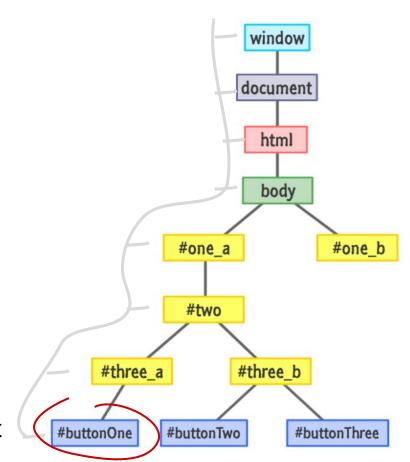

Handler por JS

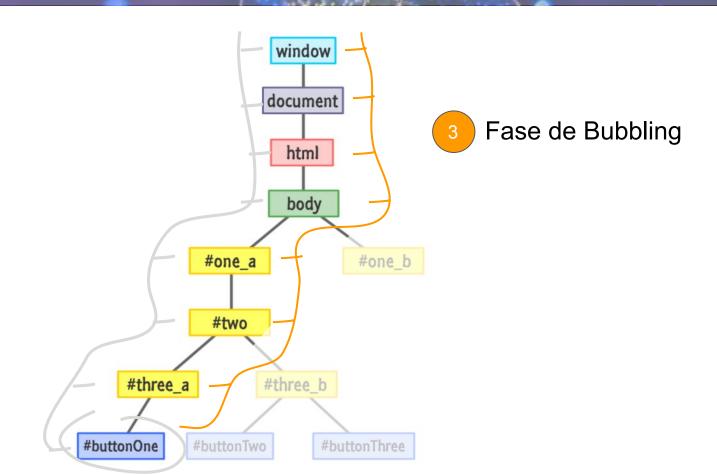

```
button.addEventListener( 'click', handler(),
false );
```

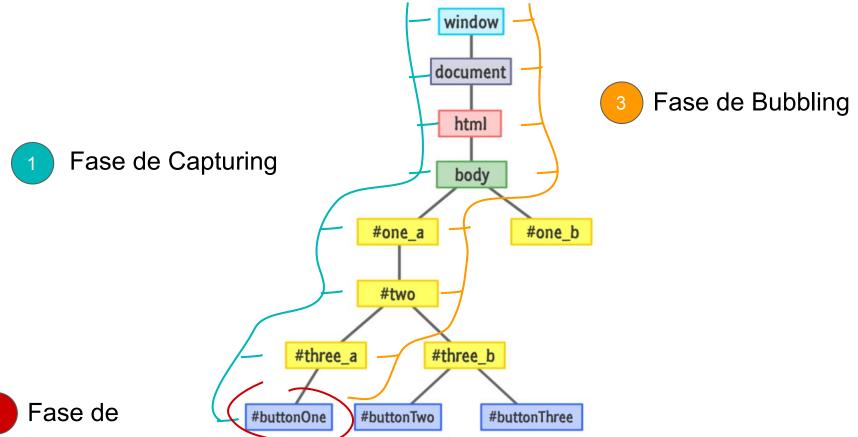

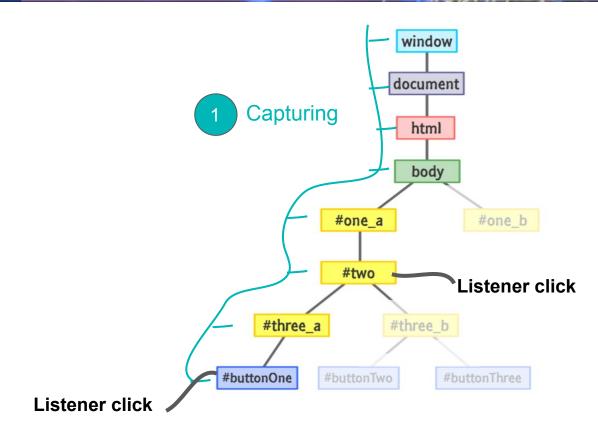

Para más detalle

https://www.kirupa.com/html5/event_capturing_bubbling_javascript.htm https://developer.mozilla.org/en-US/docs/Web/API/EventTarget/addEventListener

e.stopPropagation()

Detener propagación del evento

Más ejemplos en https://developer.mozilla.org/en-US/docs/Web/A PI/Document_Object_Model/Examples#Example _5:_Event_Propagation

e.preventDefault()

Prevenir comportamiento default

Más ejemplos en https://developer.mozilla.org/en-US/docs/ Web/API/Event/preventDefault

Loading events

document event

DOMContentLoaded

\$ (document) .ready()

Documento HTML (árbol **DOM**) completamente cargado

window event

load

\$ (window) .load()

Árbol **DOM** + **Recursos** completamente cargado

Otros ejemplos de Eventos

Mouse

- > mousemove
- > mouseover
- > mouseenter
- > mouseleave

Keyboard

> keypress

Media

- > click
- > timeupdate

Drag and drop

- > dragstart
- > dragend
- > dragenter
- > dragover
- > dragleave
- > drop

Forms

- > submit
- > focus in elements
- > extended validation

Eventos mobile

touchstart

touchend

touchmove

touchcancel

Se activan en
dispositivos con pantallas
sensibles al tacto

PREGUN_ TAS?
